

-How is the resistance inside of the OLS measured? Is it a direct resistance measurement, or is it calculated via a voltage/current measurement? **Calculated via measured voltage**

-Where is the constant current (0.25 milliamps) applied to the circuit? Is the diagram below correct? **Updated diagram below to illustrate how it is wired**

-Are both circuits in the OLS powered by the same constant current source, or separate sources?  
**no it has a separate CCS output**

-Is it possible to measure the input and output current from the circuit to the OLS?

**WARNING** - This data is controlled by the U.S. Export Administration Regulations and is classified as ECCN 9E991. Diversion or use contrary to U.S. law is prohibited.
